Assignment: Integrated Assignment  
Prof. Jarrod

## Integrated Assignment

For our work at 3035, Sheng (me) is the designer and Ouyang is the developer. At the beginning of this task, we first typeset, but at the beginning we had a big trouble, every page was very empty, so we have to design this page very professional, it will make this organization be trustable and attract more people to join or make them interested. Then there is this sketch.

### Logo:

In order to meet the requirements and conditions, we used the CSS command code for the logo, make it to be activated when it is touched by the cursor and make the fish move. At the same time, when building the web framework, Ouyang is a talent developer, she uses HTML to make the web framework more compact, python instructions make the data more impressive. (part of the logo suggestion, such as the movement or discoloration of the fish are provided by sheng)

### Wireframe:

Compared to the previous wireframe, we agree that it is too empty. For example, some text is rare, but there is nothing at the bottom of the frame, which makes the site seem untrustworthy, just like some fake websites (no intention to offend). We re-designed and typeset 6-7 new pages, added data, changed the page, and provide examples and data graphs. Make it professional.

Including (home-page, contact-page, about-page, link-page, etc)

At the same time, we also want to load the video in the webpage, just like the official video described in 1057, such as the introduction of official staff, or the record of some example.
